

Hütte HBR 302-D

Crawler Mounted Hydraulic Rotary Bored Piling Rig

Max SFA Length	mm	600
Max Auger & Cased	mm	450
Operating Height	mm	4,000
Operating Width	mm	255
Operating Weight	ton	8
Track Length	mm	1,700
Bearing Pressure	KN/m	90
Power Pack Weight	ton	3

The Hütte rig was our first large diameter micropile machine capable of diameters up to 600mm sectional flight auger or 450mm auger and cased. The Hütte was our main machine on the successful Mason's Yard Basement Development in London for "White Cube".

The rig worked in restricted access headroom in a basement with little access to the site, and installed 450mm diameter secant piled wall using hard and soft piles reinforced with threaded circular hollow section tube.
